

Start with a Rollem. Finish Like A Champion.

The Champion 990 is at the heart of all Rollem technology.

For over 40 years it has been imitated, but never duplicated. Its consistency, accuracy and solid construction give you total control while maximizing your profitability. It perforates precisely. It scores with unrivaled speed and it slits with razor-sharp accuracy.

The Champion 990 out performs every finishing machine in it's class in registration, speed, quality and economy — all without the aid of highly skilled technicians. It's precisely what you would expect from a finishing machine named Champion. And a company like Rollem.

The 990 is fast and furious.

It can perforate, score or slit at up to 18,000 sheets per hour. It runs at high velocity, but because we built the 990 on an indestructible base made of 1/2" thick Sheffield steel, parts and critical adjustments are perfectly rigid — forever. There are no high maintenance costs. The profitability goes in your pocket — not out the door.

The Champion's auto-fan feed is the most efficient and accurate ever conceived.

It automatically fans the paper by feeding from the bottom which allows continuous operation.

The entire feed roller revolves on the 990, gripping a larger area on the sheet and eliminating side-to-side movement of the stock. A calibrator positioned directly above the feed roller acts as a gate so that only one sheet at a time passes through the heads.

The quality of score you get on the Champion is identical to that of a die score press.

Hard to believe, but true. A control lever mounted on the side of the 990 is used for obtaining precise scoring depth. Simply lift or lower the depth

control lever to add or release pressure without losing control of the stock as it passes through.

Our creasing units are made die by individual die so they're turned perfectly concentric. And with our patented double head process, today's sensitive stocks won't crack or buckle because your job

is scored once with moderate pressure — then scored again.

(Pictured far right)

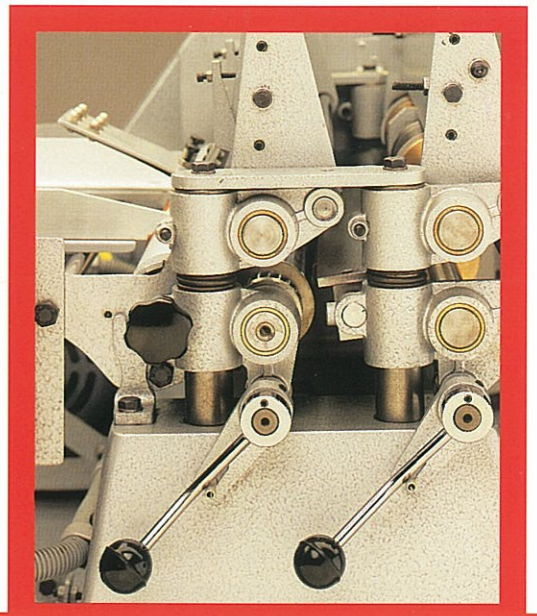

Our unique two-piece side guide can save you hundreds, even thousands of dollars.

It can salvage off-register jobs and it compensates for registration and paper stock imperfections. It makes no difference if you're cutting a piece in half, or trimming an edge, your results are perfectly concise and perfectly consistent from start to finish.

With the Champion 990, anything goes.

In fact, it will perf, score or slit any type of stock: from a 9 pound onion skin to a 40 pt. board. From a piece of tissue paper to a credit card. Even open-end NCR sets glide through with ease.

Model	Size	Gross	Net Wt.
Champion 990	18"	220	132
	24"	271	159
	30"	304	185
	36"	333	216
	42"	364	245
Champion DD	18"	295	198
	24"	357	245
	30"	425	295
	36"	492	344
	42"	575	410
Mobile Rollematic Right-angle	18"	392	269
	24"	531	357

It pays to have a Champion on your side.

The Champion 990 by Rollem will quickly prove itself your most profitable bindery machine. Its unrivaled consistency will generate profits by the hour, and satisfy your most demanding customers. Increased profitability means increased growth for your company. And, as your needs change, you can upgrade by trading your 990 up for any of our other 20 models. Like all Rollem equipment, the Champion 990 commands a remarkable 70% resale value — whether you own it one day or 30 years. In today's competitive world, it really does pay to have a Rollem on your side.

The Champion DD

The Champion 990 DD is a double shaft-ed version of the 990. Two separate male and female shafts allow you to perforate, score and slit at close pitched spacing as well as 2 stage step scoring. The double head model is available in five sizes; 18", 24", 30," 36"and 42".

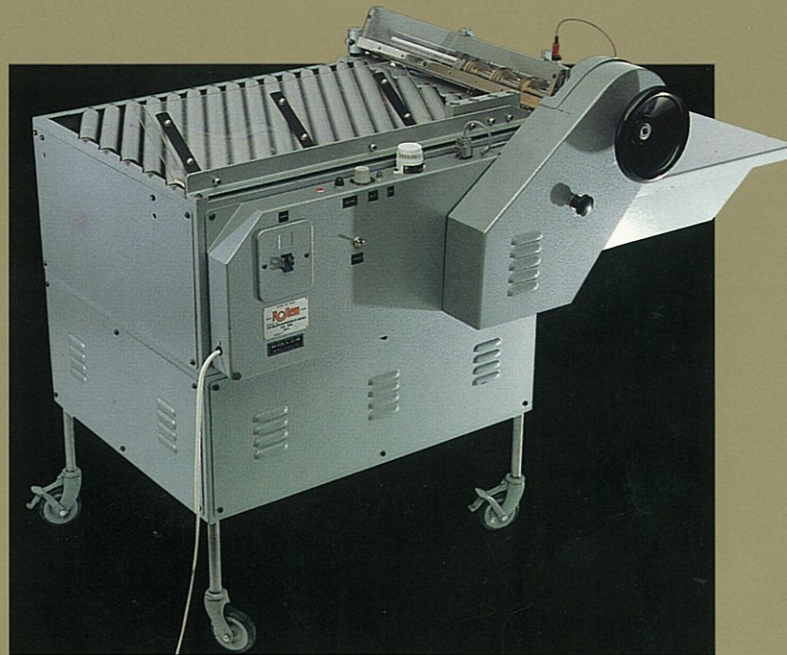

Introducing The Rollem Champion 990. The industry's most popular and affordable perforating, scoring and slitting machine.

How many machines does it take to perform 23 styles of perforations, 14 styles of scoring and precision slitting?

One.

The Rollematic

Two-directional perforating, scoring, slitting and strike perforating can be accomplished with the Rollematic Right-angle. Just one of the many options available for the Champion 990.
